1. Application Form information about transnational trainings

Transnational training in Bydgoszcz is a part of 2 transnational trainings foreseen within the project and output O.T 2.2.. It is activity 2.2 Organising 2 transnational trainings to increase partners sectoral capacities. @ results are connected to realisation of trainings:

D.T 2.2.1 Report on transnational training in Bydgoszcz

Date of delivery – 04.2017

Change of the theme for the one planned in Venice

Training will focus on different sustainability measures the partners could apply in sites to ensure the pilots remains effective in medium-term. Relevant experts will provide short presentation and conduct interactive workshops

D.T. 2.2.4 Training material in sustainability of pilot action

Date of delivery – 03.2017

Training materials will be provided by experts. They will tackle economic, environmental, social and institutional sustainability public participation instruments, methodologies. Good practices.

D.T 2.2.5 Transnational training evaluation report

Date of delivery - 03.2018 – (template to be prepared before training in Bydgoszcz and distributed on the meeting)

Transnational training will be evaluated by participants according to template prepared by WP Leader and distributed during the trainings. The report will summarise evaluations of trainees in 2 trainings.

Transnational training in Bydgoszcz

2. Time and duration

The training will take place in Bydgoszcz, Poland. It will be one day training on 10th of May.

3. Format

Few options are considered:

1. Presentation and interactive workshop based on study cases and partners pilot sites, the problems will be send from partners.
2. One expert will talk about sustainable remediation principles. Then work in groups will be formed on the Zachem study case. Participants will get general information and they will have to perform tasks given by expert (each group different field or phase of remediation process).
3. Choose different field of remediation process and work in groups on different subject.

Themes:

- Planning: evaluation concept, sustainable remediation concept, stakeholder involvement
- Investigation
- remedy evaluation options and selection, remedy design, remedy construction,
- operation and maintenance,
- monitoring, Optimisation and closeup

Methods (from SURF website):

- Green remediation
- Greenwashing
- Direct push well technology
- Remediation Process Optimisation
- Performance Based Environment Managemen
- Project Risk management
- Life Cycle Cost Analysis

To be decided after contacting trainers.
